# WEBB ABRASIVES: PAPER

## DESCRIPTION

Coated (or backed) abrasives consist of three components: the backing, the binder and the abrasive grain. The backing consists of a combination of paper cloth and vulcanized fiber. The binding is a synthetic resin in both the base and size coats, with a layer of grain in between. Then two layers of abrasive coats are applied to prevent clogging and glazing of the cutting edges.

### ► 1960 SIAREXX (Gold)

#### OPERATION/APPLICATION

Hand sanding on a variety of substrates. An unbeatable combination of flexibility and high removal makes this yellow series in semi-friable aluminum oxide your guarantee for perfect, stylish surface finishes on wood, lacquer and paint.
